

e-office Track & Trace for BlackBerry geolocate people and content

Turning your BlackBerry investment into a location aware content solution.

Lately BlackBerry® smartphones have been getting smarter and smarter. Virtually every BlackBerry smartphone you buy these days is packed with features like a camera, high speed connectivity and also GPS. What if you combine all those features within one application? You get e-office Track and Trace!

real time location based

Providing your mobile workforce with a BlackBerry smartphone, by default, makes them real-time connected professionals. They will become more responsive and can act swiftly to the ever changing world around them. You can make your colleagues on the road and yourself even more productive with real-time location based information.

e-office Track & Trace

e-office developed a mobile track & trace solution for BlackBerry smartphones that will help you locate your colleagues any moment of the day. A small and resident application will constantly collect the handheld's geographical location every 10 seconds. Those locations are constantly transferred to the Track & Trace server. With just a click on a button you can request the location of all your co-workers. All movements are all projected on the well known Google Maps interface. Asking your colleague on the phone 'where are you' will become a thing of the past.

content geotagging

Knowing your colleagues' whereabouts is a good thing. Receiving content from them while they are travelling is even better. With the e-office Track & Trace application on your BlackBerry smartphone you can take pictures and automatically upload them to the server. Then the uploaded pictures are positioned on a Google Maps' interface so they can easily get associated with the location where they are taken. Obviously you can also upload textual data just as easily.

comprehensive feature list

- ✓ high resolution logging (every 10 seconds)
